

To whom it may concern:

TACROM Service S.R.L. is an oilfield service company, located in Ploiesti, Romania specialized in Oilfield Stimulation (Hydraulic Fracturing , Coiled Tubing & Nitrogen and Gravel Pack operations) is searching for new technologies concerning chemicals, proppant and pump design to offer the customer new possibilities.

In December 2016 Tacrom opened a base in Ukraine and ever since is offering fracturing and coiled tubing services in this country.

One of the challenges we faced when starting operation in Ukraine was how to bring our crew over here and legalize their stay. Since the fracturing technology is new to Ukraine, these had to be our foreign engineers who have the unique expertise in the field.

Volodymyr Misyurak acted as our legal advisor on the matters of state regulations concerning involvement of foreign employees in Ukraine. He drafted the necessary contract paperwork for the crew transfer to Ukraine (more than 30 people), ensured obtainment of all work related permits as well as residence permits for extended duration.

We can recommend Volodymyr as a reliable and experienced lawyer who can be of good service to your business in Ukraine, especially on such matters as employment and energy regulations. We were extremely satisfied with all the work that Volodymyr did for us and can highly recommend his services to anyone requiring legal help in Ukraine.
